Next Generation Global Bond Fund

Factsheet – October 2026

Investment Objective & Policy

The Fund is an actively managed global fixed-income strategy designed to deliver relatively high yields alongside a superior risk-reward profile. The Fund invests in undervalued global bonds offering the most attractive risk-adjusted opportunities, as identified through the Manager's proprietary investment process.

The unconstrained portfolio comprises individual bonds selected for their relative value, typically favouring issuers from creditor nations. At least 80% of the Fund is invested in sovereign and quasi-sovereign bonds.

Further Information

Before making an investment and investor should ensure that they have read and understood the Key Investor Information Document and Prospectus, which can be found at WH Ireland's website, where the risks associated with an investment in the Fund are set out in full. Information in this fact sheet is at the last valuation point of the month of issue (except where indicated).

Fund Commentary

Market Commentary

October was a volatile month for financial markets, shaped by persistent inflation concerns, geopolitical tensions, shifting expectations for Fed policy and growing scrutiny of the scale of AI-related corporate investment. The S&P 500 fell 0.93%, with technology stocks particularly weak towards month-end.

US Treasury yields initially moved higher amid renewed inflation concerns, before reversing sharply in the second half of the month as equity-market volatility and concerns over technology valuations prompted a shift towards the relative safety of government bonds. Having reached an intra-month high of 5.36%, the 10-year Treasury yield subsequently rallied, closing at 4.93%, down 36bps on the month. Brent crude rose 13.63% to $117.64pb, while the US dollar strengthened modestly.

US economic data presented a mixed picture, with weak non-farm payrolls and an upside inflation surprise contrasting with robust retail sales and resilient consumer spending. Consumer confidence, however, remained subdued. The Fed voted 10–2 to hold rates within the 3.75–4.00% range. While Chair Warsh described economic activity as strong, he acknowledged that inflation remained elevated and emphasised the need for further data before making subsequent policy decisions. The outcome reinforced expectations that monetary policy would remain restrictive, with markets increasingly pricing in the possibility of another rate increase in December.

Portfolio Review

The Fund's QA USD Class returned 2.32% in October, with the strongest contributions coming from longer-dated holdings.

The largest individual contributors included US Treasuries 2053, Abu Dhabi Government 2047s and Equinor 2050s. At a country level, Abu Dhabi, Mexico and Chile made the most significant positive contributions.

Currency positions were broadly positive. The renminbi gained 0.98% against the US dollar, and we reduced our exposure during the month to ~5.5% following its strong performance. The Swiss franc benefited from safe-haven demand, gaining 1.22%, while the Singapore dollar rose 0.12%. The Japanese yen ended marginally lower, despite a late-month recovery as safe-haven demand increased.

Outlook

The global economic backdrop remains resilient, although growth is becoming increasingly uneven across regions. Investment in technology and infrastructure continues to support activity, particularly in the US, while geopolitical tensions, trade uncertainty and higher financing costs remain important headwinds. Inflation remains central to the monetary policy outlook, with renewed energy price pressures and persistent services inflation complicating the path towards lower interest rates. Beyond central bank policy, fiscal expansion, government borrowing requirements and the growing supply of sovereign debt are becoming increasingly important drivers of fixed income markets.

Higher yields offer a more attractive income cushion, but rising public debt, refinancing requirements and questions around fiscal sustainability are likely to create greater differentiation between sovereign issuers. Assessing sovereign creditworthiness through a broader lens, including national balance sheets, external assets, domestic savings and underlying economic resilience, will therefore be increasingly important. We believe a flexible, index-agnostic approach, focused on fundamental strength and relative value rather than relying solely on the direction of interest rates, is well placed to navigate this more differentiated market environment.

[1] 12M Historic Yield is calculated as the sum of the last two declared dividends per share as a percentage of the current NAV per share.

Important Information

WHI Next Generation Global Bond Fund (the “Fund”) is a sub-fund of EPIC Funds p.l.c. (the “Company”), which is an open-ended umbrella fund authorised in Ireland as a UCITS and regulated by the Central Bank of Ireland. Compensation will not generally be available to UK investors under the Financial Services Compensation Scheme. The Fund is, however, a recognised collective investment scheme within the meaning of section 264 of the UK Financial Services and Markets Act 2000 and shares in the Company may therefore be promoted to the UK public by persons authorised to carry on investment business in the UK. This marketing material has been approved in the UK by WH Ireland Limited, which is registered in England and Wales under company number 02002044, with its registered office at 16–18 Hatton Garden, London, EC1N 8AT. WH Ireland is a wholly owned subsidiary of TEAM plc. TEAM plc is incorporated in Jersey and listed on AIM. WH Ireland and the WH Ireland logo are registered trademarks. WH Ireland Limited is authorised and regulated by the Financial Conduct Authority (Financial Services Register number is 140773, you can check this by visiting www.fca.org.uk/register). Distribution of this material and the offer of the Fund are specifically restricted in certain jurisdictions. In particular, but without limitation, neither this material nor shares in the Fund are available to US persons.

On 11th December 2025, the Fund merged with EPIC UCITS – Next Generation Global Bond Fund UI (the “Merging Sub-Fund”), a sub-fund of EPIC UCITS, a SICAV regulated in Luxembourg. The past performance prior to that date is that of the Merging Sub-Fund. The Fund was established for the purposes of the merger. The investment objective and policies are unchanged from the Merging Sub-Fund.

This document is for general information purposes only and does not take into account the specific investment objectives, financial situation or particular needs of any particular person. It is not a personal recommendation and it should not be regarded as a solicitation or an offer to buy or sell any shares in the Fund. This document represents the views of WH Ireland at the time of writing. It should not be construed as investment advice. Any person interested in investing in the Fund should conduct their own investigation and analysis of the Fund and should consult their own professional tax, accounting or other advisers as to the risks involved in making such an investment. Full details of the Fund’s investment objectives, investment policy and risks are set out in the Fund’s Prospectus and Supplement which, together with the Key Investor Information Document (“KIID”), are available on request and free of charge from EPIC Investment Partners (Ireland) Limited, 1H The Atrium, Cork, T23 T2VY, Ireland and, in the UK, from WH Ireland Limited, 16–18 Hatton Garden, London, EC1N 8AT. Any offering of the Fund is only made on the terms of the current Prospectus, Supplement and KIID. A subscription in the Fund can only be made after the provision of the KIID and should be made solely upon the information contained in the Prospectus, Supplement and KIID.

An investment in the Fund is not suitable for an investor who cannot sustain a loss on their investment. There is no guarantee of the Fund’s future performance and past performance is not a reliable indicator of future performance. The value of your investment and the income derived from it can go down as well as up, and you may not get back the money you invested. The risks associated with making an investment in the Fund are described in the Prospectus and Supplement but investors should note, in particular, the following: 1) Foreign currency denominated investments are subject to fluctuations in exchange rates that could have a positive or an adverse effect on an investor’s returns. There is also a risk that currency hedging transactions for one share class may in extreme cases adversely affect the net asset value of the other share classes within the same sub-fund since there is no legal segregation between share classes; 2) The Fund is subject to the risk of the insolvency of its counterparties; and 3) Emerging market securities are subject to greater social, political, regulatory, and currency risks than developed market securities. This may impact the liquidity and value of such securities and, consequently, the value of the Fund.
